

Call for papers to our article collection, “Challenges and Advances in Long-term Forecasting in the Health Sciences”

Manuscript submission is now open for a new article collection we are co-editing on “Challenges and Advances in Long-term Forecasting in the Health Sciences”. On behalf of the editorial team, we invite you to include a paper from you in this collection - if you would like to contribute, you may indicate your interest in the link below our signature.

The Open Access collection gathers the latest and most innovative articles from researchers working on forecasting in health and related fields. We additionally aim to put together a free eBook of all published manuscripts to provide an up-to-date and comprehensive overview of the latest research developments in the area.

You can learn more about the collection here: <https://www.frontiersin.org/research-topics/36584/challenges-and-advances-in-long-term-forecasting-in-the-health-sciences>

First, we invite you to submit abstracts of finished papers or work in progress by the 25th of June. We then provide timely feedback on whether your work fits our collection. The deadline for final manuscript submissions is the 24th of August, but we can accommodate extensions on a case-by-case basis.

Please note that publishing fees are applied to accepted articles, but the team at Frontiers is happy to advise you in this regard. You can reach out to our dedicated point of contact at Frontiers, Charu, at digitalhealth.submissions@frontiersin.org if you have any questions.

You will also shortly receive a follow-up email with further details from Frontiers. If you do not wish to participate but know someone interested, please feel free to forward this call to them.

We are looking forward to your participation in our project.

Best regards,

Patrizio Vanella, Ronny Westerman, Max Hassenstein, and Matthias Schulenburg
